SEO Audit Report: www.placeonix.com

Audit date: 13 October 2026. Based on three tools: Seobility, Backlinko (Semrush) and SEO Site Checkup.

1. Executive Summary

The three tools gave very different scores for the same site. That gap is the most important finding, because it points to the likely root cause.

Tool	Score	Failed / Critical	Warnings	Passed
Seobility (On-page)	88%	1 critical issue	n/a	n/a
SEO Site Checkup	81/100 (AI Visibility 68/100)	8	4	51
Backlinko / Semrush	30/100	14	0	6

Overall verdict: the site's on-page SEO is fundamentally healthy (strong metadata, content and indexability), but it has real performance problems, almost no off-page authority, and technical-foundation issues that need verification.

Key takeaways

- Seobility and SEO Site Checkup see a well-built page: valid metadata, 1,307 words of content, indexable, status 200.
- Backlinko reports "0 words", "missing DOCTYPE", "missing charset" and "not using HTTPS". These contradict the other two tools. The most likely explanation is that the page is rendered with JavaScript (for example a React or Next.js single-page app) and the Backlinko crawler read an empty or partial HTML shell. This must be verified (see Section 4).
- The real, consistently reported weaknesses are **page speed** (slow Largest Contentful Paint, render-blocking resources, old image formats) and **external factors** (Seobility scores only 3%, meaning very few quality backlinks).
- Missing **robots.txt** and **XML sitemap** were flagged by Backlinko. Confirm directly, as they are quick wins either way.

2. Scores at a Glance

Seobility on-page breakdown (88% overall)

Category	Score	Assessment
Meta data	100%	Excellent
Page quality	100%	Excellent
Page structure	87%	Good, minor improvements
Server	87%	Good, response time can improve
Links	80%	Fair, review internal/external linking
External factors	3%	Critical weakness: almost no backlink authority

SEO Site Checkup category results

Category	Failed	Warnings	Passed
General	8	4	51
AI Insights	0	0	5
Common SEO issues	3	1	15
Speed optimizations	4	2	14
Server and security	1	0	6

The site scored 81/100 versus a top-100-sites average of 75. The AI Visibility score is 68/100, meaning brands like Placeonix are mentioned by AI assistants (ChatGPT, Gemini, Perplexity) only some of the time.

3. What Is Working Well

- **Meta title:** "Placeonix: SAP & IT Training Courses with Placement". Includes brand and primary services, and is a sensible length.

- **Meta description:** "Placeonix offers top SAP, Cloud, and IT training courses in Hyderabad. Launch your IT career with real placement support." Includes location, services and a benefit.
- **Indexability:** Page status is Index/Follow, so search engines are allowed to rank it.
- **HTTP status:** 200 (OK).
- **Content depth:** 1,307 words on the page, above the 800-word threshold Backlinko recommends.
- **Language:** English declared and detected (EN) by Seobility.
- **Page weight:** 148.90 kB HTML, which is light.
- **Response time:** 0.50 sec. Acceptable, though Seobility still suggests improving it.
- **AI Insights:** all 5 checks passed.
- **Metadata and page quality** both score 100% in Seobility.

4. Issues Found (Prioritized)

4.1 Critical: verify the crawlability and rendering conflict

Backlinko flagged the following, while Seobility and SEO Site Checkup did not:

Reported issue	Backlinko says	Other tools say
Word count	0 words, text-to-code ratio 0%	1,307 words
DOCTYPE	Missing	Not flagged
Character encoding	Missing `<meta charset="utf-8">`	Not flagged
`lang` attribute	Missing	Language = EN
HTTPS	"Not using HTTPS"	URL is https://www.placeonix.com
Headings H1-H3	Not detected	Not flagged in visible results

Likely cause: the page content is generated in the browser by JavaScript. Some crawlers read only the raw HTML and see almost nothing. Googlebot does render JavaScript, but it is slower and less reliable, and many AI crawlers (relevant to your AI Visibility score) do **not** execute JavaScript at all.

How to verify:

1. Open the site, right-click, choose *View page source* (not Inspect). If you see very little text and mostly script tags, the page is client-rendered.
2. Confirm the first line of the source is `<!DOCTYPE html>`, that `<html lang="en">` is set, and that `<meta charset="utf-8">` appears in the `<head>`.
3. Use Google Search Console's URL Inspection tool and compare "Crawled page" HTML with the live page.
4. Check that http:// redirects with a 301 to https:// and that no mixed-content warnings appear.

Fix if confirmed: move to server-side rendering (SSR) or static generation, or add pre-rendering, so the full HTML including headings and body text is delivered on the first response.

4.2 High: page speed and Core Web Vitals (SEO Site Checkup)

Priority	Issue	Why it matters
High	Largest Contentful Paint above Google's 2.5 s target	LCP is a Core Web Vital and a ranking signal; slow loading also hurts conversions on a lead-driven training site
High	Render-blocking resources	CSS and JS in the head delay first paint
High	Images not in a modern format	JPEG/PNG files are larger than WebP/AVIF, slowing load
Medium	Seobility: improve page response time	Currently 0.50 s; aim below 0.2 s for server response

Recommended fixes

- Convert hero and course images to WebP or AVIF, serve responsive sizes (`srcset`), and compress them.
- Preload the hero/LCP image and do not lazy-load it.
- Inline critical CSS; add `defer` or `async` to non-essential scripts; remove unused CSS and JS.
- Enable Gzip or Brotli compression and long-lived browser caching.

- Put the site behind a CDN (for example Cloudflare) and review hosting performance.
- Lazy-load below-the-fold images and embeds such as the floating chat and WhatsApp widgets.

4.3 High: off-page authority is almost non-existent

Seobility's *External factors* score is **3%**. This is the lowest score in the audit and the largest gap versus competitors in Hyderabad's training market.

Recommended actions

- Build a Google Business Profile with accurate NAP (name, address, phone), photos, services and regular posts, and collect Google reviews from students and placed candidates.
- List the institute on quality directories (Justdial, Sulekha, Shiksha, Careers360, Collegedunia, LinkedIn, Facebook) with consistent details.
- Earn backlinks through placement-success stories, student testimonials, guest articles on career and SAP topics, and partnerships with hiring companies.
- Publish linkable assets such as an SAP career roadmap, salary guide or course comparison.
- Monitor backlinks and remove or disavow spammy ones if any appear.

4.4 Medium: technical foundation files

Item	Reported by	Action
robots.txt missing	Backlinko	Create `/robots.txt` allowing crawling and referencing the sitemap
XML sitemap missing	Backlinko	Generate `/sitemap.xml`, reference it in robots.txt and submit it in Google Search Console and Bing Webmaster Tools
Favicon missing	Backlinko	Add `favicon.ico` plus an Apple touch icon (the page screenshot shows a logo, so confirm the favicon link tag is present in the head)

Item	Reported by	Action
Server and security: 1 failed check	SEO Site Checkup	Open the Details panel to identify it (common candidates: missing security headers such as HSTS, or HTTP-to-HTTPS redirect)

Example robots.txt:

```
User-agent: *
Allow: /
Sitemap: https://www.placeonix.com/sitemap.xml
```

4.5 Medium: page structure and links (Seobility 87% and 80%)

The screenshots do not show the individual failed items, but the scores suggest typical issues. Check these:

- Exactly one H1 containing the main keyword, followed by a logical H2/H3 hierarchy.
- Descriptive `alt` text on all images.
- Internal links from the home page to every course page (SAP modules, Cloud, Data Science, Full Stack) using descriptive anchor text.
- No broken links, and external links to authoritative sources use `rel` attributes where appropriate.
- Canonical tag pointing to `https://www.placeonix.com/`, with the non-www version redirecting to www.

4.6 Low: social and AI visibility

- Add Open Graph and Twitter Card tags so shared links show a proper title, description and image.
- Add structured data (JSON-LD): `Organization`, `LocalBusiness` or `EducationalOrganization`, `Course`, `FAQPage` and `Review`.
- Create clear, text-based answers to questions students ask ("How long is SAP training?", "What is the fee?", "Do you give placement assistance?"). This improves AI Visibility (currently 68/100).
- Allow reputable AI crawlers in robots.txt and make sure key content is in the server-delivered HTML, not only injected by JavaScript.

5. Local SEO Recommendations (Hyderabad)

Because the audience is local, this deserves its own focus:

- Target keywords such as "SAP training in Hyderabad", "SAP course with placement in Hyderabad", "best IT training institute in Ameerpet/Hitech City" (adjust to the actual branch locations).
- Create a dedicated landing page per course and per location, each with unique content, a course outline, fees, duration, batch timings and FAQs.
- Embed a Google Map and display the full address and phone number in the footer and on a Contact page.
- Publish student reviews and placement results with real names, companies and photos (with permission).

6. Action Plan

Phase	Timeline	Tasks	Impact
1. Quick wins	Week 1	Verify rendering/HTML source; add robots.txt and sitemap.xml; confirm DOCTYPE, charset, lang, favicon; submit sitemap in Search Console	High
2. Speed	Weeks 1-3	Convert images to WebP/AVIF; preload LCP image; defer render-blocking JS/CSS; enable compression, caching and CDN	High
3. On-page polish	Weeks 2-4	Fix heading hierarchy, alt text and internal links; add canonical, Open Graph and schema markup	Medium
4. Content	Weeks 3-8	Build course and location landing pages; add FAQs; publish 2-4 blog posts per month	High
5. Authority	Ongoing	Google Business Profile, reviews, directory listings, outreach and guest posts	High
6. Monitoring	Monthly	Re-run all three audits; track rankings, Core Web Vitals and backlinks in Search Console	Ongoing

7. Targets After Fixes

Metric	Current	Target
SEO Site Checkup score	81/100	90+
Backlinko / Semrush score	30/100	80+ (after rendering and file fixes)
LCP	Above 2.5 s	2.5 s or less
Seobility External factors	3%	30%+ within 6 months
AI Visibility	68/100	80+

8. Notes and Limitations

- This report is based only on the six screenshots provided. Several tools collapse individual issue details behind "Details" or paywalled sections, so exact failing items for page structure, links and the server/security check were not visible.
- The conflict between Backlinko and the other tools is treated as probable JavaScript rendering, not a confirmed fact. Verify it before investing in fixes.
- Free-tier tool scores differ in methodology, so compare trends over time within the same tool rather than across tools.
- For a deeper audit, share the Details sections of the failed checks or run a full-site crawl (for example Screaming Frog or Semrush Site Audit) plus Google Search Console and PageSpeed Insights data.
